

MARYIAND STATISTICAL ABSTRACT

1977

ACKNOWLEDGEMENTS

The 1977 edition of the Maryland Statistical Abstract was prepared by the Division of Research of the Department, PADRAIC P. FRUCHT, Director of Research. NEIL M. SHPRITZ, Chief of Business Research, was responsible for general supervision and compilation, ably assisted by IRENE TASHLICK. DINAH AARON and CRAIG MERKLE, summer student interns, who worked long and hard hours on this project, provided valuable service in collecting and organizing data. PATRICIA PARKS had primary responsibility for clerical operations.

Funding for the summer student interns was provided by the Office of Development Planning of this Department, and that Office's cooperation is deeply appreciated.

We thank the many contributors to this volume. Notes below each table credit its sources. Where indicated, contributors have requested copyright protection. Permission to use copyright material must be obtained directly from each source so cited.

Office of the Secretary

2525 Riva Road, Annapolis, Maryland 21401 • 301 - 269-3174

Blair Lee III Acting Governor Herbert B. Cahan Secretary

January 31, 1978

The Honorable Blair Lee III Acting Governor of Maryland State House Annapolis, Maryland 21404

Dear Governor Lee:

I am pleased to transmit to you the "1977 Maryland Statistical Abstract", which was prepared and published by the Department as part of its continuing effort to maintain, on as current a basis as feasible, a data base on which sound decisions affecting the welfare of our citizens can be made by government and private enterprise.

We update this publication every two years, thus providing a statistical record of the composition, changes and trends in population, incomes and employment in business and industry, governmental receipts and expenditures, agriculture, natural resources, and many other aspects of life in Maryland. Hopefully, State and local government agencies, individuals, and business firms will find the data useful to them.

We believe this edition to be the most complete compendium of State data yet produced in Maryland. In updating and expanding the coverage of the last Statistical Abstract, we have added many pages of newly developed data and a special table of "highlights". Also, in the Appendix to this volume, we have reproduced a number of historical time series, by month, of significant economic indicators.

Great care has been taken to insure the usefulness and accuracy of this publication. As with previous editions, this report has benefited from suggestions and comments from interested users. We anticipate a continuation of such support in the future.

Sincerely,

Herbert B. Cahan

POPULATION AND VITAL STATISTICS

The population of Maryland is estimated to have grown by nearly six per cent since 1970, according to data furnished by the Maryland Department of Health and Mental Hygiene.

State estimates for all fifty states for the period ending July 1, 1976 indicate that the 5.9 per cent increase in Maryland's population from 1970 to that date is slightly above the percentage increase of 5.6 per cent nationally.

As might be expected in an area as diverse as Maryland, there is considerable variance of growth among the political subdivisions of the State. Howard County was the fastest growing subdivision with a 69.6 per cent increase in population over the period from April 1, 1970 to July 1, 1976. Next were Calvert (35.9 per cent), Charles (31.3 per cent), Carroll (21.1 per cent), and Harford (20.7 per cent) Counties. At the opposite extreme was Allegany County (-2.1 per cent). Concurrently, Baltimore City showed the largest loss in population, with a drop of 8.1 per cent indicated.

Consistent with national growth patterns, the population shifts have been urban in nature. The greatest increases are to be found in metropolitan Baltimore, with the exception of Baltimore City, and in extensions of suburban metropolitan Washington, Calvert and Charles Counties and Frederick.

As is readily seen, with the exception of Baltimore City itself, and Prince George's County which has experienced a considerable decrease in its growth rate, the political subdivisions with below average growth are predominantly rural in their characteristics. Approximately 84 per cent of Marylanders reside in the Baltimore and Washington metropolitan areas, with the greater growth coming from Howard, Calvert and Charles Counties.

More detailed demographic aspects are available as of this writing.

Baltimore City contains by far the greatest concentration of non-white citizens in the State. Of the 901,170 non-white Marylanders, 442,570 or 49.1 per cent reside in that jurisdiction. The overall percentage of non-white persons in the State is 21.9 while in Baltimore City, 52.4 per cent of the population is non-white. Of the total population estimate for the State, 37.9 per cent are white male, 40.2 per cent white female, while non-white males comprise 10.4 per cent and non-white females, 11.4 per cent.

The birth rate of the general population in Maryland followed the declining national trend. All political subdivisions shared in this decline. The State's birth rate in 1975 was 12.8 per thousand population; with the white birth rate standing at 11.7 and the non-white at 16.8. At the same time, the death rate here was 7.8 per thousand, with the white death rate at 8.0 and the non-white at 7.1.

There were 44,700 marriages in Maryland during 1975. Roughly 15,400 divorces and annulments were granted during that year, with 63.6 per cent being decreed on the grounds of voluntary separation.

⁽¹⁾ Per 1,000 population.

EDUCATION

Education has been standing in the spotlight of publicity throughout the Seventies. Nearly 861,000 people were enrolled in public schools throughout Maryland in 1976. Following the national trend, elementary school enrollment has been declining due to decreases in the population of persons of elementary school age. Despite the decreases in births, nursery school attendance has been climbing. While most formal education takes place in the public school environment, approximately three-fourths of nursery school enrollment is in private schools.

On a statewide basis, the cost per pupil has risen to \$1,458, and the number of pupils per teacher and administrator has declined to 18.3.

Public high schools in Maryland graduated more than 56,000 students in 1976, a figure more than 3.5 per cent higher than the one recorded two years earlier. And, 42.8 per cent of these graduates continued into higher education.

Nearly 31,000 full time students were enrolled for the Fall 1976 term in the 20 two-year colleges here. If one includes part time students, the figure rises to almost 82,000. The 28 four-year colleges and universities compiled a full time undergraduate enrollment in excess of 69,000 students. Added to this figure are the more than 29,000 part time students and the 30,000 graduate students, bringing the total to over 211,000 students enrolled in institutions of higher education in Maryland.

HEALTH SERVICES

During the 1977 Fiscal Year Maryland's hospitals for the mentally ill treated over 15,000 patients, a decrease of 4 per cent from the number of patients treated during 1976. This decrease continues a trend observed for several years which may be due to shortened periods of hospitalization of new admissions and the gradual continuing decrease in the number of long term patients. The average daily size of the patient population declined 2.3 per cent during this period, from 4,205 in 1976 to 4,109 in 1977.

It is generally believed that the rate of occurrence of most mental illnesses has not changed appreciably and that these expanding figures reflect the growing acceptance and usage of psychiatric hospitals and clinics for the short term intensive treatment of alcoholism and acute psychoneurotic and personality disturbances.

This section of the Abstract is expanded from earlier editions to include general health care as well as mental health care. Overall, there were more than 21,500 hospital beds in the State as of March 31, 1977, and there were just over 22,800 beds in other types of health care facilities here. And, according to the most recent data available (1975), there were, on a Statewide average, 615 Marylanders per physician providing direct patient care. As one might expect, there is considerable variation among the political subdivisions of the State.

CLIMATE OF MARYLAND

Maryland lies in the region midway between the rigorous climates of the North and the mild climates of the South. Since it is located in the middle latitudes where the general atmospheric flow is from West to East across North America, it has a continental type of climate with its marked temperature contrast between summer and winter; however, two important bodies of water, the Chesapeake Bay and the Atlantic Ocean have an important modifying control on the climate, especially by moderating extreme temperatures of adjacent areas.

The average annual temperature ranges from 48° F. in the Garrett County area to 59° F. in the lower Chesapeake Bay area. The highest temperature on record is 109° recorded at several places in Allegany and Frederick Counties while the lowest is -40° F. at Oakland, Garrett County. Based on the 1931 - 1960 and 1941 - 1970 periods, the average annual precipitation ranges from as much as 46 to 49 inches at opposite ends of the State, Allegany Plateau and Southern Eastern Shore, to as little as 36 inches in the Cumberland area located in the "rain shadow" just to the east of the Allegany Plateau. Elsewhere over the State, the annual precipitation ranges monthly betwen 40 to 44 inches. Monthly distribution is quite uniform, averaging between 2 and 4 inches each month and reaching a maximum between 4 and 6 inches in July or August. Annual snowfall ranges from a minimum of 8 to 10 inches along the coastal areas of southern Eastern Shore to a maximum of near 100 inches in parts of Garrett County.

Prevailing winds are mostly from the west-northwest to northwest except during the months of May through September when they become more southerly. Damaging or dangerous storms, such as tornadoes, hurricanes, and blizzards, are infrequent. The climate of Maryland is a dependable natural resource which provides an excellent setting for the agricultural, industrial, commercial and recreational activities of its citizens.

Included within this section is a rather detailed table showing cloud cover conditions in Maryland. It is indeed interesting to note the variations in the amount of cloud cover from region to region. These conditions determine the feasibility of many horticultural projects.

NATURAL RESOURCES

Maryland's 2,960,000 acres of forest land represent nearly 47 per cent of the total land area of the State. As one might expect, however, there is considerable variance among the political subdivisions. The vast majority of commercial forest land is held in private lands (approximatel6 93.4 per cent) while public ownership accounts for the remainder.

Over 80 per cent of the timber in Maryland is of the hardwood varieties, and an estimated 183.6 million board feet of lumber were cut during the fiscal year ended June 30, 1975. Forest fires are always a threat, and in the 1976 fiscal year, 908 such blazes burned a total area of 3,555 acres. All counties suffered from these fires, and the causes were primarily carelessness in nature.

Nearly \$173 million worth of minerals were extracted during 1974. The leading commodities were bituminous coal and stone, accounting for 28.1 per cent and 27.6 per cent, respectively, of the total. Sand and gravel were next as these items accounted for another 17 per cent of the value extracted. Major producing areas were Baltimore, Frederick, Prince George's, Carrett, and Carroll Counties.

Maryland touches both the Atlantic Ocean and the Chesapeake Bay. Seafood, therefore, becomes a vital resource. As impressive as the data reported herein appears to be, the user must be cautioned that there is a substantial undercount, what with the large number of sport fishermen active in our waters.

Data indicate a Maryland catch in 1976 with a dockside value of nearly \$31.3 million. The major share of this catch is credited to shellfish which account for almost \$29 million of the total. Oysters led that year (over \$16.4 million), clams (approximately \$6.6 million), and crabs (more than \$5.6 million). Leading finfish catches by value were striped bass (rockfish), bluefin tuna, and flounder.

LABOR FORCE, EMPLOYMENT, AND UNEMPLOYMENT

More than 1.7 million Maryland residents were employed in 1976 as both the civilian labor force and the working members of that labor force continued to grow. On an average basis, the unemployment rate of 6.8 per cent in Maryland for 1976, reflecting the nationwide recession, was slightly down from 6.9 per cent for 1975, but still considerably higher than the unemployment rate for 1974 (4.7 per cent).

Annual average employment figures in Maryland for 1976 indicate gains over 1975 in all sectors with the exceptions of transportation and utilities, and federal government employment. Those major areas of employment hardest hit by losses during the 1974 - 1975 period were manufacturing, contract construction, transportation and utilities, and finance, insurance and real estate. From 1975 to 1976, the larger gains were reported in the non-manufacturing sectors, contract construction (3.1 per cent), services (2.9 per cent), and state and local government 2.7 per cent).

The role of federal government civilian employment in Maryland should not be overlooked. More than 131,000 Marylanders were employed by various federal agencies at the end of 1975 and this figure places Maryland third among all of the jurisdictions of the Nation in terms of resident population in relation to federal employment. An additional 49,156 civilian and military employees work for the Department of Defense.

Included in this section are tables showing commutation patterns of workers. Both interstate and intrastate destinations are shown. It is interesting to note that nearly 40 per cent of our labor force works outside its subdivision of residence.

Labor relations have continued good in Maryland. In conformity with historical trends, the per cent of estimated work time lost by stoppages in Maryland was again lower than corresponding national figures.

Stoppages, for years stated.

MANUFACTURING EMPLOYMENT AND PAYROLLS

While the primary cause of economic growth has been in the non-manufacturing sector, certainly manufacturing represents a major factor in Maryland's economy, with 15.4 per cent of the non-agricultural wage and salary employment. Annual average employment in manufacturing was 231,600 employees in 1976, or approximately 13.1 per cent of the total employment in Maryland.

Despite a declining manufacturing employment level, payrolls increased significantly in the period from 1972 to 1975. Manufacturing payrolls increased by 19.7 per cent during this period, a figure attributable primarily to wage and salary increases. The largest manufacturing payrolls in Maryland during 1975 were in the primary metals industries, electrical equipment and supplies, and transportation equipment.

Average weekly earnings for all manufacturing in the State rose from \$157.58 in 1972 to \$218.59 in 1976 while average hourly earnings rose from \$3.92 to \$5.52 during the same period.

Value added⁽¹⁾ figures for 1973 were led by primary metals, food and kindred products, electrical machinery, transportation equipment and chemicals and allied products industries. While ranking somewhat below certain other mid-eastern states in value added, Maryland experienced a percentage growth of more than 24 per cent over the 1968 to 1973 time period.

Historically, Baltimore City has been the dominant location for manufacturing firms in Maryland. In 1976 that political subdivision had virtually 36 per cent of the firms in the State. Next in order, in terms of number of firms, but far behind, are Baltimore (262), Montgomery (208), Prince George's (198), Anne Arundel (103), and Washington (91) Counties.

⁽¹⁾ The difference between the value of goods and the cost of materials or supplies that are used in producing them. Value Added is derived by subtracting the cost of raw materials, parts, supplies, fuel, goods purchased for resale, electric energy, and contract work from the value of shipments.

Source: Maryland Department of Human Resources. Employment and Payrolls Covered by the Unemployment Insurance Law of Maryland, for years stated.

⁽¹⁾ The data for 1975 and 1972 are not strictly comparable due to revisions in the Standard Industrial Code in 1972. The two digit classification experienced one major revision: SIC 19, "Ordnance and Accessories" was incorporated into SIC 36, "Electrical Equipment and Supplies." The 1972 figures are based on the 1967 SIC while data for 1975 are based on the 1972 SIC.

TRADE

Trade activity encompasses retail trade, wholesale trade, and selected services. Figures developed by the United States Bureau of the Census in its business censuses are quite interesting.

More than 31,000 retail establishments were situated in Maryland in 1972, and their aggregate sales were approximately \$9.5 billion. These figures represent a 25.3 per cent increase in the number of establishments and a 63.3 per cent increase in dollar volume from the data reported five years earlier. Eating and drinking places, food stores, and gasoline service stations were the more frequently reported types of establishments of those categorized, while food stores, automotive dealers, and general merchandise group stores reported for higher dollar volumes.

The number of wholesale trade establishments grew by more than 20 per cent over the same period, and a 71.4 per cent dollar volume increase was shown. Establishments dealing in machinery, groceries, and motor vehilces and automotive equipment were the more frequently reported, and dollar volume rankings showed motor vehicle and automotive equipment, groceries, and machinery establishments leading the list.

The reader is cautioned to read the note on page 134 before comparing the data concerning selected service industries activity reported for earlier years. Nearly 64 per cent more in terms of numbers of establishments were reported in 1972 than in 1967, and their receipts were up nearly 98 per cent over the period.

NOTE CONCERNING COMPARABILITY OF THE 1967 AND 1972 CENSUSES OF SELECTED SERVICE INDUSTRIES*

The 1967 and 1972 censuses were conducted under similar conditions and procedures. However, strict comparability of the data for the two censuses is limited. In both 1967 and 1972, classifications were based on the Standard Industrial Classification (SIC) Manual; however, there were major revisions to the SIC structure in 1972 which limit the comparability of data between these two censuses. It was not possible to retabulate 1967 data based on the revised 1972 classifications for comparative purposes, since in many cases the necessary information was not available for assigning the new 1972 classifications to the 1967 records. In the following tables which deal with the Maryland Selected Services Industries, data for the State as a whole are presented for both 1972 and 1967 based on the 1967 classifications. However, tables presenting 1972 data by political subdivision are not comparable with the 1967 breakdowns by political subdivision.

^{*}Abbreviated note from the Bureau of the Census, 1972 Census of Selected Services Industries, Maryland, SC 72-A-21, Appendix A, page A2.

PERSONAL INCOME

Maryland's personal income rose in 1976 to \$28,514,000,000, an increase of over 58 per cent from 1971. The total personal income of the State represents 2.1 per cent of the total personal income of the United States, the same as the 2.1 per cent in 1971.

Per capita income in Maryland rose to \$6,880 in 1976, up 53 per cent from 1971. This figure placed the State tenth in the nation in this category.

In average per household effective buying income in 1976, Maryland ranked second among the mideast states with a level of \$17,591. As might be expected, the metropolitan areas were the leaders, with suburban Washington's Montgomery County having the highest average disposable income (\$24,443) of any county in the United States. Baltimore, Howard, Prince George's and Charles Counties each have disposable income figures in excess of \$19,000 per household, while at the other end of the scale, Garrett, Caroline, Allegany and Dorchester Counties all have levels of approximately \$11,000 or less.

The Gross State Product for Maryland is estimated to have risen in current dollars, to \$31.1 billion, an increase of 54 per cent above the level of 1971. The Gross State Product concept is roughly equivalent to the national level Gross National Product, i.e., the State output of goods and services valued at market price.

Note on the Poverty Level:

The poverty level is a designation used by the federal government as one means of identifying areas and persons with income levels so low that some economic hardship is likely to be present. Various levels have been determined depending on family size, sex of family head, number of children and type of residence. The poverty level threshold averages about \$3,750 on a national basis. The data for families below the poverty level have several limitations—for instance the poverty levels are not adjusted for state or local variation in costs of living, but are satisfactory for giving a general picture of the existence and location of low income.

(1) Consists of Federal and State and local direct relief (including supplemental security income payments), food stamp payments, and payments made through several other relief programs, such as refugee assistance.	ind State	and loca	al direct	relief ((includir	ig supple	mental se	scurity gee assi	income p	ayments), food	stamp

⁽²⁾ Consists of payments to unemployed workers through State, Federal, and railroad unemployment insurance programs.

-159-

⁽³⁾ Includes retirement and disability payments made through the social security programs and through railroad, military, and Federal civilian retirement programs; medicare; educational assistance to veterans and others; and miscellaneous transfers, such as business transfer payments.

⁽⁴⁾ Included in Far West region total.

U. S. Department of Commerce, Survey of Current Business, May 1977. Source:

CITY WORKER'S FAMILY BUDGET

The city worker's family budget refers to the annual cost of a moderate living standard for a family comprised of a 38-year-old husband, a wife not employed full time outside the home, a 13-year-old boy, and an 8-year-old girl. This is the model family devised by the Bureau of Labor Statistics, U. S. Department of Labor.

In 1976 the average urban worker's budget was \$16,236 while the Baltimore budget was \$16,195. The Washington budget at the same time was \$16,950. Using 39 metropolitan areas to equal 100, the Baltimore area had an index of 100 while the Washington area index was 104. As will be noted in accompanying tables, average earnings differ considerably as between occupational groups when using the metropolitan areas base.

STATE FINANCE

Maryland's fiscal 1976 State expenditures totaled \$3,504,293,000. Of this total 26.6 per cent went to education, 15.7 per cent to highways and transportation, and 14.2 per cent to public health, hospitals, and mental hygiene, with 8.7 per cent going to public assistance programs.

During the same fiscal year the State received \$3,531,548,000 with 25.2 per cent of that total coming from income tax sources, 11.9 per cent from retail sales and use taxes, 9.8 per cent from motor vehicle user taxes and fees, 19.8 per cent from federal funds, 10.6 per cent from sundry fees, licenses, and charges, 7.9 per cent from property, franchise, and excise taxes, and 14.2 per cent from bond proceeds.

Net cash expenditures have increased nearly 75.7 per cent from fiscal year 1972 to fiscal year 1976 while net cash receipts have increased more than 74.6 per cent over the same time period. As might be expected, the fiscal 1976 growth is quite large in both categories, with net cash expenditures 13.6 per cent above the year-earlier figure and the net cash receipts standing 14.1 per cent above the prior year.

Entitlements.

⁽²⁾ Includes State share.

 $^{^{(3)}}$ Includes county shares, exclusive of payments to individual jurisdictions within a given county.

⁽⁴⁾ All mumicipalities except Baltimore City.

FINANCIAL INSTITUTIONS

The number of active banks of all types in Maryland increased from 116 to a total of 118, between 1973 and 1975. Total assets increased during the period by 14.1 per cent. State banks and trust companies numbered the same as in 1973, but total assets increased by 13.4 per cent. While the number of national banks rose by 7.7 per cent, their total assets rose by 19.3 per cent. Meanwhile credit unions decreased in number from 37 in 1973 to 34 in 1975. Total assets of the credit unions in 1975 stood at \$128.8 million, an increase of 32.8 per cent since 1973, however, possibly indicating an increase in the size of such institutions.

The number of building, savings, and loan associations in Maryland decreased from 233 at the end of 1973 to 206 two years later. Of those associations active at the end of 1975, 55 were Federally chartered, 151 State chartered and 135 were State chartered with Maryland Savings Share Insurance Corporation insurance.

More than \$4,200,000,000 in mortgage loans were outstanding as of December 31, 1976 by the associations in Maryland, a 7 per cent decrease from 1973. Similarly, total assets decreased to \$4,884,921,500, representing a 6 per cent decrease.

LIFE INSURANCE

The strength of the Maryland economy is again evident in the field of life insurance. Nearly \$4,329,000,000 of ordinary life insurance was purchased in Maryland during 1976. This figure represents a 13 per cent increase from the prior year and a 96 per cent increase since 1970.

When all types of life insurance are considered, Marylanders held 7,899,000 policies with an in force valuation of almost 46.5 billion dollars. The average amount in force per family in Maryland stood at \$31,400 during 1976, representing an increase of 24.6 per cent since 1973. Maryland's average is therefore somewhat above the national family average of \$30,100 of life insurance in force.

LIFE INSURANCE IN FORCE IN MARYLAND: 1976

TYPE	NUMBER OF POLICIES (1,000)	AMOUNT (\$1,000,000)
Total	7,899	\$46,497
Ordinary	2,738	23,998
Group	1,714	19,292
Industrial	1,853	1,034
Credit	1,594*	2,173

Average amount in force per family \$31,400 (24.6 per cent increase since 1973).

Note: "Credit" is limited to life insurance on loans of ten years' or less duration. "Ordinary" and "Group" include credit life insurance on loans of more than ten years' duration.

*Includes group credit certificates.

MASS MEDIA

There are two major market centers for the mass media in the State, as well as several smaller ones. The major market centers are metropolitan Baltimore and metropolitan Washington, D. C.

Fourteen daily papers, including two designated as Washington, D. C. publications serve the State, and five more publish twice weekly. In addition, there are a myriad of weekly newspapers put out at least once a week throughout the State.

There are ten television stations on the air in Maryland. In addition, there are five stations on the air from Washington, D. C. which serve many viewers in Maryland.

Four of the stations in Maryland are noncommercial, as is one operating from Washington. However, the noncommercial channels in Maryland, with the call letters, WAPB, WMPB, WCPB AND WWPB are state operated stations, with the Maryland Public Broadcasting Commission being the licensee. Eventually, the Commission will operate seven channels throughout the State. In addition to the facilities existing presently near Annapolis, Baltimore, Hagerstown and Salisbury, transmitters are planned for Cumberland, Frederick and Waldorf.

Beside its potential range, the commercial television channel on the Eastern Shore has its range augmented by use of cable subscription, and the commercial channel operating from Hagerstown has its range expanded to reach the surrounding Pennsylvania and West Virginia areas as well as the Maryland viewers due to the many homes subscribing to cable services in that market.

Maryland radio listeners have their choice of 50 AM stations as well as several Washington, D. C. outlets which reach the State's residents. In addition to these stations, there are 46 FM stations located in Maryland, and,

again there are additional facilities originating from the District of Columbia. These FM stations cover the broad range from simultaneous programming with AM affiliates to partial simulcasting to independent operations.

The communications facilities are thus well represented in the State, and Maryland's citizens have broad latitude and availability among the printed and electronic media.

COURTS AND LAW ENFORCEMENT

This section deals with the Juvenile Facilities, adult correctional facilities, state trial courts (civil and criminal), and the federal trial court in Maryland (civil and criminal).

The juvenile facilities in Maryland are under the jurisdiction of the State Division of Juvenile Services, a constituent agency of the Department of Health and Mental Hygiene. In the twelve month period from July, 1975 through June 1976 there were 58,105 juvenile court cases reported with the largest number coming from Baltimore City (24,884), followed by the metropolitan counties of Prince George's (9,074), Baltimore (5,230), Anne Arundel (5,050), and Montgomery (4,417). The average daily population in March 1976 of the six juvenile institutions in the State was 1,147. Comparable average population data available for March, 1977 show a 7.0 per cent increase to 1,227.

Adult correctional institutions in the State housed an average daily population of 6,588 inmates in fiscal 1976. The average annual per capita cost per inmate was \$5,136. More inmates were committed from Baltimore City (2,718) during fiscal 1976 than were committed from the combined counties (1,662). These statistics, of course, deal with the statewide correctional institutions, and local facilities are not included. The institutions covered in this publication are the Maryland House of Correction, Maryland Penitentiary, Maryland Correctional Institution-Hagerstown, Maryland Correctional Institution for Women-Jessup, Correctional Camp System, Central Laundry and Community Corrections.

As of August, 1976 there were 85 Circuit Court (trial) judges in the state which is divided into eight judicial districts for administrative purposes. Each county has a minimum of one jurist, and Baltimore City has 22 trial judges. On the basis of population per judge, the range is from 16,600 per judge in

Kent County to 82,500 per judge in Carroll County. Though these extreme ranges are severe, a more moderate range will be noted generally by the reader of the table. On a statewide average, the population per judge is 48,888 with 1,068 civil cases and 397 criminal cases representing the trial load. During the year from July 1, 1975 through July 30, 1976 62,158 civil cases were filed in Maryland trial courts, an increase of 15.3 per cent over fiscal year 1974, and 54,464 civil cases were disposed of in the same period, a 4.6 per cent increase in dispositions.

There was a 37.2 per cent increase in the filing of criminal cases, and a 23.9 per cent increase in dispositions in this area. As a consequence, therefore, when all cases (civil and criminal) filed in the trial courts of Maryland are considered for this period, there were 95,902 cases filed, an increase of 22.1 per cent, while there were 87,374 dispositions, representing a 11.1 per cent increase.

The United States District Court for the District of Maryland (coincident with the state boundaries) sits in Baltimore City. Relatively speaking its backlog remains in good condition. As of June 30, 1976 there were 1,792 civil cases and 619 criminal cases pending. In absolute terms 1,655 civil cases and 1,199 criminal cases were terminated during the fiscal year.

The bankruptcy backlog did increase somewhat over the same time frame, with 1,530 cases being commenced and 1,001 terminated. More than 1,146 passport applications were handled, and 1,589 aliens were naturalized in the Court during the 1976 fiscal year.

SOCIAL SERVICES

Programs of the various local departments of social services are subject to the supervision, direction, and control of the Maryland Social Services Administration, a major agency within the Department of Human Resources.

Generally speaking, the locally administered programs are public assistance, financial eligibility for medical assistance, child welfare services, and other services related to social planning. Funds for the various programs come from Federal, State and local sources, with percentage portions varying by the type of program.

In fiscal 1976 over \$278,000,000 was paid out to individuals and families, an increase of 12.6 per cent over the preceding year and a 95.7 per cent increase since 1970. Over 54 per cent of these payments were in the form of aid to families with dependent children. The total value of food stamp coupons sold in fiscal 1976 was \$134,100,421, an increase of 14.5 per cent over the preceding year.

ENERGY

As the days of cheap and apparently plentiful energy came to a rather abrupt end recently, public awareness of the problems rose dramatically.

Demand for natural gas energy grew by nearly 18 per cent from 1966 to 1976 in terms of the number of customers. But, in recent years the demand is really not shown in the traditional way as moratoria by the utility companies have forbidden new gas hookups. Conservation measures, higher prices, weather, and the national recession all combined over the period from 1973 to 1975 to reduce the quantity of natural gas consumed.

Total commercial and industrial electric sales rose nearly 97 per cent from 1966 to 1976. After a drop during the 1973 - 1975 period, sales increased by some 12 per cent from 1975 to 1976. Virtually all of the installed generating capacity is privately owned.

Much of the public interest has been devoted to the motor vehicle gasoline situation. Data show that after an absolute reduction in the gallonage sold in Maryland and in the Nation during 1974 the number of gallons sold increased in 1975 and 1976 (a rise of 3.8 per cent from 1975 to 1976). The average price for regular grade gasoline sold in the Baltimore metropolitan area rose from 40.9 cents in October 1973 to 63.1 cents in July 1977. Premium gasoline rose from 44.8 to 68.3 cents per gallon over the same period. Prices in this area were consistently higher than national averages.

The telephone continues to play an increasingly dominant role in communication. There are nearly one and one-half million accounts with almost 3.1 million telephones in the State. Continued expansion is promised what with the growing usage of the telephone for data processing and consumer services.

THE PORT OF BALTIMORE

The Port of Baltimore ranks as the fourth largest foreign trade port in the United States. In 1976, 34,595,827 short tons of cargo valuing over \$8.2 billion were handled. Exports show an increase over 1975 of 7.8 per cent in tonnage and 4.6 per cent in value; imports decreased by 12.2 per cent in tonnage and 4.9 per cent in value.

Although the export tonnage represents only 43 per cent of the total tonnage, its value is nearly 63 per cent of the total value. This fact is due to the more sophisticated nature of the manufactured devices primarily in export as opposed to the bulk commodities and raw materials being imported.

In terms of import tonnage the principal countries of lading on foreign commerce are Canada, Venezuela, Brazil, and Liberia, but in value West Germany, Japan, the United Kingdom, and Venezuela lead, in that order. Broken into trade areas, Europe has a lead in value and tonnage, and is our principal trader.

The use of containerization is growing markedly, and within the port, facilities built for this purpose are being used more readily. The Maryland Port Administration is presently constructing additional public container facilities at Locust Point to supplement existing container facilities at the recently expanded Dundalk Marine Terminal and the Canton facility. In addition, private enterprise has already dedicated a major container facility in the Baltimore Port. Gantry and giant bridge cranes serve these facilities. The response of shippers to the Port's containerization programs has been quite impressive and a tribute to the facilities.

AIR TRAVEL

Baltimore-Washington International Airport serves as the major commercial air facility in the State. This operation is owned by the State of Maryland, and it is operated by the Maryland Department of Transportation.

During 1976, nearly 3 million passengers were handled on more than 230,000 air traffic operations. Freight traffic totalled almost 97 million pounds, and a significant volume of mail was loaded and unloaded at the facility. In November 1975 Express service was discontinued due to legislation, adding to freight, mail and passenger operation totals. Total freight operations showed a slight increase over 1974, although did not reach 1972 levels. Most other types of operations showed a healthy increase over 1974.

Worthy of mention are the facts that an expansion program is currently underway for both passenger and freight operations at the facility. Also, plans are underway as of this writing for the construction of a train station along the Amtrak mainline just one and one-half miles from BWI, with the station to be used for boarding and disembarking passengers to and from Baltimore, Washington, and other points in the corridor.

In addition to BWI, a listing of airports and heliports in Maryland shows
41 other facilities, spread out among 23 of the State's 24 political subdivisions.
Scheduled operations serve several of these locations.

MOTOR VEHICLES

Motor vehicles play a major role in the Maryland economy. In addition to traffic volume and highway utilization rates, the manufacture, distribution, maintenance, and commercial use of motor vehicles in the State represent a major economic force. Employment in the motor vehicle industry and related industries accounts for 17.5 per cent of total employment in the State.

There were 2,342,844 motor vehicles registered in our State during the 1977 registration year. Some 2,489,270 persons held licenses to operate vehicles as of January 1, 1977.

There are 25,514 miles of highway in the State, half of which is in the metropolitan Baltimore and the metropolitan Washington areas. Interstate highways comprise more than 367 miles of these totals. Traffic recorders located at 39 points in the State for 1976 reflect the increase in travel since the easing of the gasoline crisis in 1974. The total of all toll facilities showed an increase of 6.6 per cent from 1975 to 1976; traffic on J. F. Kennedy Highway (I-95) in 1976 was 4.7 per cent higher than the total for 1975, while volume on the Chesapeake Bay Bridge rose 26.5 per cent.

Motor vehicle user taxes, license, fines, and costs amounted to over \$345,509,000 in fiscal 1976, up \$22,745,000 from the fiscal 1975 figure. The 1976 amount represents 9.8 per cent of the total State receipts for the fiscal year.

AGRICULTURE

Maryland, like most other states of the United States, and especially the "megalopolitan" states, has been undergoing a shift from rural agricultural living and employment to urban manufacturing and service employment.

Accordingly, the land devoted to farming and the number of farms has been steadily declining. In the period from 1968 to 1977, the land in farms has declined from 3,200,000 acres to 2,925,000 acres while the number of farms in the State has declined from 19,700 to 17,500. A natural corollary here has been the decline in farm workers to an annual average of 31,000 in 1972, including family and hired workers. This trend however, has been reversed in recent years. In 1976 the number of farm workers reached an annual average of 34,000.

The largest sources of farm income are livestock and livestock products, which, in 1975, accounted for 60.7 per cent of all agricultural receipts in Maryland. The dominance of this category is due primarily to dairy products and poultry. Cattle and calves, eggs, and hogs are important, but they represent substantially smaller elements. In the same year field crops accounted for approximately 30 per cent of the receipts for all commodities, led by corn, soy beans, and tobacco. At the same time vegetables and melons, as well as greenhouse and nursery products were important sources of farm income in the State.

Prices received by farmers have improved quite substantially in the period from 1969 to 1976. Using a base period of 1947 - 1956 to equal 100, the index number for all commodities rose from 103 in 1969 to 168.0 in 1976. Likewise the all crops index rose over the same time period from 109.0 to 198.0 while an index based on livestock and livestock products went from 100.0 to 153.0.

HOUSING AND CONSTRUCTION

Traditionally, home ownership has been a goal for most Marylanders. Virtually 59 per cent of the housing units in the State were owner occupied at the time of taking the most recent Census of Housing. The variations in percentages of owner occupancy ranged from 71.8 per cent in Howard County to 42.2 per cent in Baltimore City.

Overall, the quality of housing is rather good when one looks at the generally cited characteristics. Again, there is considerable variance among the political subdivisions.

The total construction contract values ratio of Maryland to the Nation stood at 2.0 in 1976. Speaking in absolute dollars, slightly over \$2.0 billion of construction contract awards were made in the State during that year, an increase of nearly 7.5 per cent over 1975. More than \$828.5 million of the value was for residential construction contracts while \$777 million represented awards for non-residential buildings. Non-building construction accounted for the remaining \$421 million.

There were 26,309 new building permits issued in Maryland for residential dwelling units of all types, an increase of nearly 34 per cent over 1975 during which period this sector of construction was the hardest hit by the recent national recession.

Although Maryland is not a major mobile home market, there is a small but steady demand for this type of housing. From 1960 through 1976, 33,095 new mobile homes were shipped into the State.

REAL ESTATE

The total assessed value of real property in Maryland in 1978 stood at \$25,395,967,000, representing an increase of 19.4 per cent over the corresponding aggregate assessment in 1976. The greatest valuation occurs in Montgomery, Prince George's and Baltimore Counties, and in Baltimore City, in that descending rank.

Strides have been made along the local jurisdictions to achieve uniformity in assessment level ratios, and all assessors in the State are employees of the Maryland Department of Assessments and Taxation. The Statewide average in 1975 was 43.8 per cent, a ratio apparently lower than those shown in earlier years. But, this reduction in level is due to the change in the inflation factor used in the determination of assessments.

The federal government owns and leases substantial acreage and buildings in the State. The size of the federal operation is due, at least in part, to the proximity of Maryland to the District of Columbia.

As of September 30, 1976 the federal government owned more than 205,000 acres of land and nearly 12,000 buildings on Maryland land. And, as of September 30, 1976, just over 3,800 acres and more than 1,050 buildings were leased to the federal establishment. Increases in both ownership and leasehold interests have occurred substantially in recent years.

FEDERAL OUTLAYS IN MARYLAND

While Maryland ranks forty-second among the states in area and eighteenth in population, it ranks fourteenth in total federal funds received.

Of the nearly \$8.5 billion in 1976 outlays in Maryland, more than \$2.1 billion were in Montgomery County, \$1.8 billion in Baltimore City, while Prince George's County received over \$1.2 billion and Baltimore County, a little over one billion.

From the myriad of federal programs, outlays in the retirement and disability programs were over \$1.5 billion, defense outlays were over \$2.4 billion and it is thus seen that these many federal programs constitute a major impact on the Maryland economy.

ELECTIONS

Maryland is often referred to as a barometer of national voting patterns. In 1976, the voters of the State cast their ballots for President, giving

Jimmy Carter 53.0 per cent of the popular vote, while nationally the Democratic candidate polled 50.8 per cent of the popular vote. In fact since 1932, Maryland has voted against the winning presidential nominee only twice, and these were extremely close ballots.

There were nearly 1,943,391 registered voters in Maryland for the 1976 general election. Of these registrants, 69.5 per cent were listed as Democrats, 24.1 per cent as Republicans, and 6.4 per cent either declined to give a party preference or were registered with other than the Democratic or Republican Parties.

Marvin Mandel was reelected Governor of Maryland in 1974 as he polled 63.5 per cent of the popular vote, carrying 18 of the 24 political subdivisions of the State. At the same time the rather independent pattern of voting in Maryland asserted itself as Senator Charles McC. Mathias, Jr., a Republican, was reelected to the United States Senate, carrying a popular vote of 57.3 per cent and 22 of the 24 political subdivisions. Democrat Paul Sarbanes polled 56.6 per cent of the popular vote to unseat Republican incumbent Senator J. Glenn Beall, Jr. in the 1976 election for United States Senate.

Comptroller Louis L. Goldstein and Attorney General Francis B. Burch, both Democrats, were reelected as part of the Democratic Party ticket in 1974. The 1977 session of the Maryland Legislature is composed of 165 Democrats and 23 Republicans.

The Congressional delegation of Maryland is composed of one Republican and one Democratic Senator, and five Democratic and three Republican members of the House of Representatives.

⁽⁶⁾ Allegany, Baltimore, Carroll, Frederick, Garrett, Howard, Montgomery, Washington.

⁽⁷⁾ Baltimore City.

⁽⁸⁾ Montgomery.

RECREATION AREAS

The use of recreational land in Maryland is rather substantial. More than five per cent of the land area of the State is classified as recreation or open space land. As might be expected, there is considerable variation among the political subdivisions, with Garrett (18.6 per cent) and Allegany (16.1 per cent) Counties having the greater figures.

It was estimated, using data from the 1970 Census of Population and Housing, that 1.8 per cent of the State's housing stock is comprised of recreation homes. Worcester County has the highest proportion in the State, followed by Calvert and Garrett Counties. Once again the variety of our natural resources is highlighted by this geographical dispersion of recreational activities from the ocean to the mountains.

RECREATION HOMES, BY POLITICAL SUBDIVISION: 1970

POLITICAL SUBDIVISION	PER CENT OF RECREATION HOMES (ESTIMATED)				
MARYLAND	1.81				
Allegany	1.00				
Anne Arundel	4.23				
Baltimore	0.70				
Baltimore City	0.51				
Calvert	17.49				
Caroline	2.02				
Carroll	0.36				
Cecil	8.96				
Charles	3.08				
Dorchester	3.62				
Frederick	1.66				
Garrett	14.76				
Harford	0.46				
Howard	0.80				
Kent	7.57				
Montgomery	0.33				
Prince George's	0.21				
Queen Anne's	6.87				
St. Mary's	5.88				
Somerset	4.76				
Talbot	3.88				
Washington	1.52				
Wicomico	1.33				
Worcester	36.45				

Note: The number of recreation homes is estimated as the sum of the enumerated seasonally vacant and migratory housing units and 30 per cent of year-round "other vacant" housing units. Thirty per cent is the percentage for the state that year-round housing units held for occasional use are as a proportion of all year-round other vacant housing units. The other portion of this total of vacant year-round housing consists of housing open for rental occupancy or for sale.

NOTES TO STATISTICAL APPENDIX

This Appendix to the 1977 Maryland Statistical Abstract is divided into three parts. First is a series of tables which we anticipate to be of great utility to many users. Historical time series of many important economic indicators are shown by month, both unadjusted, and, then adjusted for seasonal variations. Many requests for such data are received, and it is hoped that this ready reference will format the material so that maximum benefit may be derived.

Next is a series on prime contract awards by the Department of Defense. This series has been added as the result of increased interest shown in the topic by the citizenry of our State. And, fortuitously, very timely data were received just as this publication was going to press.

Finally, we are pleased to present a set of tables depicting selected demographic characteristics for Maryland, federal outlays by major federal agencies and federal outlays by major functions.

FOOTNOTES:

a/ NOTES ON COVERAGE: It is emphasized that data on prime contracts by state do not provide any direct indication as to the state in which the actual production work is done. For the majority of contracts with manufacturers, the data reflect the location of the plant where the product will be finally processed and assembled. If processing or assembly is to be performed in more than one plant of a prime contractor, the location shown is the plant where the largest dollar amount of work will take place. Construction contracts are shown for the state where the construction is to be performed. For purchases from wholesale or other distribution firms, the location is the address of the contractor's place of business. For service contracts, the location is generally the place where the service is performed, but for transportation and communications services the home office address is frequently used.

Hore important is the fact that the reports refer to prime contracts only, and cannot in any way reflect the distribution of the very substantial amount of material and component fabrication and other subcontract work that may be done outside the state where final assembly or delivery takes place.

The report includes definitive contracts and funded portions of letter contracts and letters of intent, job orders, task orders, and purchase orders on industrial firms, and also includes interdepartmental purchases, made from or through other governmental agencies, such as those made through the General Services Administration. The state data include upward or downward revisions and adjustments of \$10,000 or more, such as cancellations, price changes, supplemental agreements, amendments, etc.

The estimated amounts of indefinite delivery, open-end or call-type contracts for petroleum are included in the report. Except for petroleum contracts, the report does not include indefinite delivery, open-end, or call-type contracts as such, but does include specific purchases or delivery orders of \$10,000 or more which are placed against these contracts. Also excluded from the report are project orders, that is production orders issued to Government-owned-and-operated facilities such as Navy shipyards. However, the report includes the contracts placed with industry by the Government-operated facility to complete the production order.

- b/ Includes all contracts awarded for work performance in the United States. The United States includes the 50 states, the District of Columbia, U. S. possessions, the Canal Zone, the Commonwealth of Puerto Rico, the Trust Territories of the Pacific, and other areas subject to the complete sovereignty of the U. S., but does not include occupied Japanese Islands.
- c/ Includes contracts of less than \$10,000, all contracts awarded for work performance in the U.S. possessions, the Commonwealth of Puerto Rico, the Trust Territories of the Pacific, and other areas subject to the complete sovereignty of the U.S., contracts which are in a classified location, that portion of intragovernmental contracts and directed procurements for foreign governments under The Foreign Military Sales Act entered into overseas, and contracts for the Civilian Health and Medical Program of the Uniformed Services (CRMMPUS).
- d/ Net value of contracts of \$10,000 or more for work in each state and the District of Columbia.
- e/ Civil Functions of the Army Corps of Engineers for flood control and rivers and harbors work. Civil Functions data are shown separately, and are not included in military functions tabulations.

NOTE: Percentages may not add due to rounding.
